Russia said Thursday it was working with the U.S. to make sure that Iran does not possess the type of fissile material the U.S. said it believes Iran was trying to use to develop a nuclear weapon. "We're working to ensure that Iran does not possess this highly enriched uranium. We have asked for assistance from the U.S.," Russia's deputy foreign minister, Sergei Ryabkov, told reporters at a news conference in Moscow. "We want to move away from the perception that Russia has some kind of secret plan to somehow contain Iran in the region," he said, adding that any efforts must be taken on the basis of international law. The U.S. intelligence community believes Iran has succeeded in developing nuclear weapons, a conclusion Iran has rejected. On Aug. 2, U.S. President Barack Obama announced a range of new sanctions against Iran over its nuclear program. The sanctions included a ban on sending Iranian crude oil to any country in the world. This is the first time the U.S. has imposed such sanctions. A little-known U.S. law from 1996 requires the U.S. president to certify that Iran is not trying to build a nuclear weapon. If Obama certifies that Iran is working to develop a weapon, he must give Congress 30 days to decide whether to lift the sanctions or keep them in place.
