AutoCAD for mobile and web apps, built-in work processes, and shape memory, including details and links that can be viewed when hovering over or tapping the element. AutoCAD was originally based on the PARC VPL graphical language. After its introduction in 1983, Autodesk realized that a full-featured professional CAD program was not ready for market, given the cost and complexity of the existing

VPL. In late 1983, Autodesk began development on a simpler, PostScript-based file format for AutoCAD called DXF (for Drawing Exchange Format) that also supported vector-based drawings in addition to its raster-based predecessor, DX. DXF is still a basic, although stable, foundation for the newer, more advanced AutoCAD 2018. AutoCAD 2018's native file format, DWG (for Design Web Format), features both DXF and the native XML-based DWG file format. DXF was introduced as AutoCAD V2 in 1985. Three years later, Autodesk began planning for its first product designed specifically for large organizations. While its first implementation, AutoCAD for Mac, ran only on Apple Macintosh computers, the

next release, AutoCAD for Windows, was available for the IBM PC family of personal computers (PCs), and remained so for the next two decades. AutoCAD was first released on the Macintosh in November 1988. The first release for the Windows PC, AutoCAD R13 (December 1988), included an early implementation of AutoLISP, an earlier version of the Python scripting language, and several other modern features. AutoCAD was the first major desktop CAD software for Windows to include scripting tools and extended feature sets. In the late 1990s, AutoCAD for Windows included many tools and functions from CAD viewers such as Microsoft Visio, plus a number of AutoLISP macros that supported the

operation of AutoCAD on Windows. Top: AutoCAD for Mac version 2.0, released on October 12, 1986. Bottom: AutoCAD for Windows version 4.0, released on August 10, 1994. AutoCAD for Windows and AutoCAD for Mac also included a number of "shareware" features in the early 1990s. At that time, users of both apps could download any of the shareware tools free of charge, but AutoCAD's basic price for a complete installation was \$1495 (

AutoLISP is the original implementation and one of the most widely used languages.

While a .NET assembly could theoretically be implemented, a programmable API in the Autodesk Exchange Apps store was added in 2006 to make it easy to automate

AutoCAD Activation Code, and much easier to create scripts in AutoLISP and C++ to automate various functions in AutoCAD. One example is AutoCAD360,

which is a 360° visualization application that includes an integrated scripting language called Auto3D, and includes a Java API for automation in various ways.

Auto3D was based on ObjectARX, and

integrates with Autodesk Exchange Apps. Autodesk Exchange Apps in turn integrates with AutoCAD, and uses the Auto3D API.

Other Autodesk Exchange Apps include Vue, a programmable visual interface to Adobe Flash, Autodesk Exchange Nav and Autodesk Exchange Maker, which allow users to create various 3D objects from 2D CAD drawings. Other In 2000, Automated Transfer of Information (ATI), an Autodesk company division, introduced the Autodesk Exchange, a bulletin board system for distributing content using XML and client-server architecture. This system allowed for the exchange of information, increasing the efficiency of technical support. In 2005, Autodesk acquired Solar Software, a company founded in 1990 by

programmer Tim Goode, which made the software AutoCAD and AutoCAD LT. The company was renamed Autodesk Solar, and later Autodesk Solar and Interactive Systems (ASIS). ASIS produced the following commercial applications: Autodesk Design Review (ADR), Autodesk Architectural Desktop (ADT), Autodesk RealitySpace (also known as "Autodesk Interactive 3D"), and Autodesk 360 Architectural View (360AV). In May 2007, Autodesk announced that the name of its AutoCAD R14 release would be "AutoCAD 14", as opposed to AutoCAD LT 14. Autodesk also explained the reasoning for the new name. The new AutoCAD features included the following: The ability to keep

Press It was Justin Trudeau's first chance to talk about his past as a summer student at Harvard and what it has to do with his approach to governing in Ottawa. At a press conference on Parliament Hill on Tuesday, the prime minister used his annual "trip to the Centre of Canada" to discuss a wide range of issues, from the Liberals' tax plan to the conflict in the Middle East. In one of the more intriguing exchanges, the prime minister was asked why he continues to employ a chief of staff that was at one time a close adviser to his friend, former prime minister Stephen Harper. Mr. Trudeau said the person who currently serves as the chief of staff has done an outstanding job for him. Story continues below advertisement "I'm not
