He contracted programmer Gary Kildall, who subsequently became the company's president and CEO. Kildall wrote the initial version of the program for a newly released IBM PC running MS-DOS, while he was still working on another project. The first version of AutoCAD, known as DesignCAD, was released in December 1982. Kildall originally envisioned his company's software as having the same characteristics of a drafting or drafting machine. However, he was pleasantly surprised to find that most CAD users were actually architects, draftsmen and engineers who simply wanted to modify or improve their design work instead of creating original artwork. Thus, the first versions of AutoCAD focused more on making a design easier and more efficient to create than on faithfully reproducing a drawing. In addition to programs for creating the standard 2D drafting or architectural drawings, AutoCAD supports the creation of the many other kinds of 2D and 3D drawing, technical illustrations, and presentation documents and graphics that architects and other graphic designers might need. With AutoCAD, designers can view their work on a wide range of computer platforms, ranging from ultra-portable devices such as tablet computers and smartphones to large mainframe-class computers. AutoCAD has since been released on several computer operating systems, including DOS, MS-DOS, Windows, and Unix. Initially, software for AutoCAD was provided only to the first 20,000 customers. A license was sold for \$50,000. The company's first public demonstration of AutoCAD took place in San Francisco in 1983 at the "Drafting Symposium," a two-day gathering for architects and engineers. At

that time, AutoCAD was a somewhat buggy and slow product. By the time version 1.0 of AutoCAD was ready for release, around 1983, the company was experiencing significant growth. Its revenues were rising rapidly, it was opening new offices in Germany and Japan, and it had a software development team of around 100 people. To accommodate the growing popularity of AutoCAD and to meet the new demand, Autodesk decided to move its operations to the company's new headquarters, in San Rafael, California
