We have entered an era in which the role of biodiversity is receiving increasing attention, both among scientific communities and policy makers. In this paper we trace the historical development of this growing scientific awareness and explain why the quest for diversity should not only be viewed in terms of what has been gained, but also of what has been lost. The disappearance of diversity may have unanticipated negative consequences for our species and their environments. In addition, this loss represents a form of environmental pollution. We argue that it is time for us to pay more attention to the rapidly growing number of species around the
