3dssoft was established in 1998 and has been developing since. the company is one of the world's leading developers of highly advanced software technology for graphics, audio and video editing. 3dssoft is one of the leading 3d studio providers. our products include 3d studio max, 3d studio, 3ds max plugin, 3ds max elements, 3ds max tools, dreamweaver extension and others. 3dssoft is the developer of free 3ds max plugins, max elements and is the developer of free dreamweaver mx extensions. many of our products are used in a wide range of business areas - film, animation, video, games, design, architecture, etc. we have over 200 000 users in all countries and are constantly working to improve our products. 3dssoft is a privately held company with sales offices in russia, china, japan, germany, usa, canada, and the uk. 3dssoft is a member of the adobe partner program. i think the majority of the people in this thread are already using it so i won't worry about reviewing it. that being said, i've been using it for about a month now and i love it. it is by far one of the better looking plugin/script in the vray menu. it was the first render i ran in the scene, and it is looking good. it is not perfect, but it is good to start with. it works fine, as long as i have not changed any

---

vray settings. i did put in a knife tool to look like a knife. i did have to change the blade for the knife tool to be a knife. i was able to change the pivot point to the centre, and it came out perfect. it is not a big issue, but it is good to know where to adjust things, if you need to. the knife tool, even with the blender knife, is still a bit of a pain. you have to go into the vray settings menu, where there is a sub menu for tools, and there is a sub menu for the knife tools. within the knife tools, you have to go back to the main menu and go to the knife tools section. you have to select the knife tool, and then select the knife blade from the menu. if you have a knife blade, that is going to be different. when you start out, select the knife tool, and make sure the blade is the blade you want. then set the pivot point to the centre. i set the knife blade and the pivot point to the same spot. you have to set the rotation to the handle, to the blade, and then to the pivot point. it might be possible to put the pivot point where the blade is, but i am not sure about that. you have to set the pivot point to the same spot, and then you have to set the rotation. i also put a knife handle on the knife and rotated that to the side. it is a bit hard to do, but you can work around it. it is not a big issue, but it is something to keep in mind, if

---

you are going to do other tools. i like the knife tool, but you have to watch for issues. overall, the knife tool works and looks good. i set the knife blade to have a cutting edge, and it looks good. i am a little wary about using the knife tool, but it is good to know where you can change things, and how to change things.
