autocad mep 2019 allows you to set up and run a project to specific requirements. the mep interface is similar to a windows project manager, and allows you to quickly visualize the major functional components of a project, such as: schematic design & processes, structures, piping, mechanical, electrical, plumbing, machining, and assembly. before 2d graphics in cad, a drawing would always be created from scratch. most people would use a pencil and paper to create a drawing. after a few iterations, they would draw over the original drawing with more pencil and paper until they thought they had created a drawing that they were happy with. this process was time consuming, and not very efficient. in 1970, autocad (automatic computer aided design) was released. this was the first ever cad program. in this type of program, a drawing is created on a computer. the result is a vector (line, polyline, circle, ellipse) drawing. using this vector drawing, you can re-draw and re-draw the same drawing over and over again. in this way, it takes less time and results in a much faster final drawing. over the years, cad has become much more than just the layout of a building. today, the rapid growth of computer software and the rise of the internet of things has led to the development of many new cad software products. today, there are many cad software packages and product lines. cad software is any software that is used to create a drawing or model. autocad is a well-known and widely used cad software package. autocad is used to create architectural, engineering, and other types of drawings. there are many different cad software products that are used to create drawings. autocad is available as a stand-alone software product or as a part of other software products.
