Alpine Pxah800 Sound Manager Software 12

yes, i had bad luck on this. the problem was that the part replacement disc was installed on the wrong interface, which of course will not work. i tried various things with

the alpine pxa-h800
remote control, the
flawless alpine pxa-
h800 system
integration audio
processor was very
helpful. it is not
supported by adi. i
bought this
processor and car
audio converters

directly from alpine
(without any
warranty at that
time). the cell phone
calls and radio
signals were getting
strange and that's
what ultimately
made me go back to
the factory set-up. i
was also trying to

get the remote to work, but no luck with that either.

after i got a replacement remote, the new unit became erratic in the car when the car battery was disconnected from the car, but worked ok once the

battery was re-installed (i can't remember if it was before or after i got the replacement remote). so i would advise you don't buy it over the internet. that should have been my first hint. when you first install

the remote, make sure you turn off the car and take the battery out before you do it. no updates are available for this processor. can you use the original cd (not the hxt flawlessalpine pxa-h800 instead) with

the original hx/hf interface. if you want to buy an ota update, you have to buy the ota update for all these car processors from your dealer. you can not buy them separately. they are mass manufactured.

the software may contain different limits on the number of data you can save. this is also the case when using an external storage medium. therefore it would be advisable to read and confirm all terms of

conditions and to
save the updates to
your esp (external
storage program).
