# Time Worked Calculator for Windows 10, 8, 7, Vista, XP, 2003, 2000. Time Worked Calculator - time tracking software that is as simple and easy to use as its name suggests. What does it include? # Dashboard view # Multiple sessions # Graphical time tracker # Time logging for each session # Editable records # Automatic import from CSV files # Export to CSV # Automatic export to PDF # Uninstaller # Multi-language support (up to 20 languages) # Platform independent # Fast # Extremely easy to use # Extremely easy to install Summary: Time Worked Calculator is a lightweight application whose sole purpose is to keep track of the hours spent working. It comes in handy especially for users who are working in different shifts, as it helps them calculate and verify the number of worked hours. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to check the number of worked hours. It packs a simplistic interface which offers quick access to all the days of the week. For each day the application allows users to add time values for the start and end shift as well as for the start and end lunch time. Time Worked Calculator is able to display the number of worked hours per day, and it also calculates how much time you have spent working in a week. Furthermore, you can pick a starting and ending date for the week and add weekly notes by simply typing in the text message in the dedicated dialog. Additionally, you can make the program calculate a weekly pay by specifying the hourly payment value as well as the overtime value. Other configurable settings allow users to pick the display format (decimal or hours and minutes) and select the days when the lunch break is taken. It doesn't bundle a built-in calendar which could make the entire process easier, but it keeps a log that contains detailed information about time management; it can be exported to a plain text file. All in all, Time Worked Calculator doesn't comprise many dedicated parameters for helping you calculate the worked hours. However, it offers a clean layout and some basic features, and doesn't eat up CPU and memory. Thanks for the feedback! About: Keymacro is a small utility that makes it possible to store multiple macros in a single file. This is particularly useful if you want to store multiple unrelated scripts in a single file. The idea is to have a central location in the file system which contains all your definitions in a single file. You will be able to insert new macros without the need of recompiling the project, or opening the project file in a text editor. The macros can be placed at any location in the file, they will just be available to all project in the next release. Settings are read and written using xml, so it's possible to change the settings (and thus the macros) of a single project without the need of opening the project file in the text editor. Additionally, the files can be easily shared between computers. Features: Macros can be placed at any location in the file No need of recompiling the project or opening the project file in a text editor Each macro can access the controls and groups of the project The macros are registered to the project as a library, so it's possible to edit and remove the library without recompiling the 2edc1e01e8
